## Day 5 – Fujifilm Instax Share SP-2

*Create and print professional style photos from your smartphone.*

A large majority of people use their smartphones to capture important moments in their lives, such as weddings, concerts, holidays, etc. Whether it's snapping a photo for social media or taking selfies with your friends, a good smartphone camera is a must.

The ability to print your photos directly from your smartphone is a good accompaniment to your mobile devices, especially for those who enjoy mobile photography. A good brand to consider is Fujifilm's Instax line of mobile printers, which recently released their new model, the Instax Share SP-2.

The device is capable of converting pictures on your smartphone, tablet, or other mobile devices to physical photos and prints in an instant. This is done by through Fujifilm's Share app on your smartphone or mobile device which contains a Wi-Fi network to connect to the printer.

You can connect up to 8 devices to the printer at any given time.

The app allows the user to access their photo libraries from their mobile devices, computers, and social media. From there, the user can create black and white, and sepia photos, edit and crop photos, add text and emojis to photos using built-in templates, as well as a host of other features.

Printing time for the Share SP-2 is approximately 10 seconds. This is due to the device's laser exposure printing method which does not require ink and creates a sharper, more well-defined image.

Currently, the Fujifilm Instax Share SP-2 costs **\$239.99** (CDN). There is also an additional cost for the 10-pack of printer paper used to develop the photos which is approximately **\$25-30** (CDN).

With its compact size and high quality photos, the Fujifilm Instax Share SP-2 is a great tool for creating copies or photos taken by your smartphone or mobile device.
