## Day 8 – Microsoft Universal Foldable Keyboard

*Transform your mobile devices into a portable laptop.*

### Note:

Answers to the Tech Days of Christmas quiz are available [here](#)

Mobile devices such as tablets, iPads, and smartphones, are excellent devices but they do not have the same functionality and features as a traditional desktop or laptop. This can sometimes be frustrating as users might want to work off of their tablet or smartphones, especially when they are travelling or commuting to and from work.

Microsoft has made strives to accommodate this need with their Universal Foldable Keyboard. This keyboard contains a light, ultra-thin, compact design which allows users to travel with it easily.

The device is held closed by magnets so it will not open in your bag while you are carrying it. Opening and closing the keyboard will turn it on and off so as to avoid draining the battery.

The keyboard comes equipped with Bluetooth wireless technology and is able to pair with 2 different, yet compatible, devices and allows for switching between the two devices. The keyboard also contains full size keys for typing, is water-resistant, and is rechargeable through a micro-USB and contains an average battery life of 3 months.

Currently, the keyboard is compatible with Microsoft Windows tablets, iPads and iPhones, and Android devices and tablets (although some people have experienced difficulties with Android devices). For more information see the [Ratings and Review](#) section on the Microsoft website)

The cost of the Microsoft Universal Foldable Keyboard is around **\$84.05(CDN)** and can be found in-store, online, and on the Microsoft store.

A great resource for your tablets, the Microsoft Universal Foldable Keyboard allows you to work off all of your devices and helps to reduce the amount of hardware you are carrying on a day-to-day basis.
